Alaa Attya

Staff Software Engineer at Delivery Hero
Berlin, Berlin, Germany

Summary

Software engineer, #coding tweaker, Web Apps killer, techie fan. I've +12 years of market experience in software engineering. I believe that tech is being considered to help business people grow their business and help normal people in their day to day work and make their life even easier. I've developed many projects and products ranging from small, medium to corporate size. I've worked with/ mentored many teams in house and also remote teams. I believed in remote work (totally inspired by David Heinemeier Hansson). I usually spend my time learning whatever new technology (as it might help in any future job and also for entertainment). I believe in automation, actually, everybody should automate any repetitive amount of work.

Experience

Delivery Hero

7 years 1 month

Staff Software Engineer

January 2021 - Present (5 years 4 months)

Berlin, Germany

Senior Software Engineer

April 2019 - January 2021 (1 year 10 months)

Berlin Area, Germany

- Developed dynamic payment routing system to efficiently direct payments across multiple accounts and PSPs.
- Designed and implemented a dynamic payment methods listing and filtration tool based on vendor, currency, and payment context.
- Led migration of payment integration from PHP (Symfony) to GoLang, mentoring the team to adopt and transition to the new technology.
- Built a robust payment observability framework using New Relic to enhance monitoring and performance tracking.
- Initiated and contributed to payment stability improvements by introducing load testing processes.

- Worked on enhancing resiliency and fault tolerance in payment integrations to mitigate issues across various PSPs.

Fly365.com
