Moe M.

Transformational International Tech Leader, Career Coach, understanding humanity in depth. CPTO, Ex-Google, Ex-Amazon, Ex-Microsoft, Ex-Booking.com, Mensa + Intertel / All opinions are my own and mine only.

London, England, United Kingdom

Summary

In the age of AI, there are two sides to the spectrum: A-Those who become puppets to the AI and treat it as a prophet sent by god and take whatever it spews to them as the absolute truth: you don't want them on your organization. Sooner or later, you will get sued or hacked or whatever disaster just waiting to happen. No question about that, it's only "when" B- Those who refuse to deal with AI completely and treat it as the absolute evil. You don't want them either because they will slow you down to a halt! Within that spectrum, you have multiple flavors that mix the two. Between those who use AI to increase implementation speed but then lose that time reviewing what it spewed, or those who don't do that and use random methods that make them "feel" they are doing well, when in all practicality, they are the same as group A. And then there is group C, very few people belong there and I can say I am one of them. Those people are different from everyone else in a plethora of ways, one of them is: how to maximize ROI with whatever tools you have at hand (including AI) achieving the best of what you can achieve short term while also maintaining both medium and long term in perfect harmony. Within that unique group, you will find me sitting in the middle :) Key Strengths: * Visionary Leadership: Inspiring and motivating teams to achieve ambitious goals while fostering a collaborative and high-performing culture. * Strategic Execution: Translating vision into reality through meticulous planning, efficient resource allocation, and rigorous follow-up, ensuring flawless execution and impactful outcomes. * Technical Expertise: I possess deep technical knowledge and a proven ability to leverage cutting-edge technology to achieve business objectives with extensive experience in distributed systems & LLM/ML/ AI Infrastructure. * Masterful Negotiation and Conflict Resolution: Transforming potential conflicts into opportunities for collaboration, consistently achieving win-win solutions that exceed expectations

and solidify stakeholder relationships.* Talent Magnet and Mentor: Attracting and cultivating top talent, empowering individuals to unlock their full potential and accelerate their professional growth through personalized mentorship and guidance.

Experience

Blue Light Card

Engineering Leadership

January 2026 - Present (4 months)

London Area, United Kingdom

Blue Light Card | Defence Discount Service

I run engineering across the business: six squads, each with EM + Full Stack engineers + Mobile engineers + QA Engineers in addition to PM and Design.

Horizontally to that, there is also a mix of Staff and Principal engineers.

My job is to turn cross-functional chaos into decisions, plans, and shipped outcomes. I sit at the intersection of product, commercial, business, and tech to keep delivery fast, reliable, and sane.

Focus areas:

- Engineering execution: delivery, quality, reliability, operational excellence
- Org design + leadership: EM coaching, senior IC enablement, team boundaries
- People systems: hiring revamp, leveling, career growth, performance management
- Ways of working: design reviews, documentation, incident response, onboarding

Builvero

CEO & Founder

December 2025 - Present (5 months)

London Area, United Kingdom

If “reputation” is the currency for digital economy, then we are building the bank!

Builvero is an AI-first and AI-native platform designed for one purpose: to bring digital builders together.

Software engineers, designers, data & AI specialists, and digital creators all face the same problem: building alone is slow, disconnected, and full of

friction. Finding the right people, the right projects, or the right opportunities shouldn't be this hard.

Builvero fixes that.

The platform combines intelligent discovery, project collaboration, skill-based matching, and structured workflows into one place. Users can create projects, join existing ones, find collaborators based on real skills and experience, and grow through hands-on building with others. It's a practical ecosystem built around action, not theory.

Builvero is intentionally invite-only at launch. The goal is to shape a high-quality community of people who are serious about building, learning, and creating real work together, not another passive social feed.

Whether you're shipping code, designing interfaces, training models, analyzing data, or producing digital content, Builvero gives you a way to find the right people, build better projects, and accelerate your growth.

This is the network for people who build.

Self Employed

Digital Transformation Leader

December 2024 - Present (1 year 5 months)

London Area, United Kingdom

I have been doing digital transformation for over a decade for a lot of customers all the way from smaller startups to countries, this is not only tech focused but also business, marketing, product, people and the entire 360 view of the whole system.

Jendi

Co-Founder & CPTO

September 2024 - June 2025 (10 months)

London Area, United Kingdom

We are trying to solve the problem of why humans behave in certain ways? This is done through using modern technology through deep learning and AI combined with biomarkers, nutrition, behavioral and psychological data and most recently, quantum mechanics to fully understand the human behavior.

Out of that, there are endless applications, our focus as a first application would be to prevent wellness problems like burnout from ever happening. This was done as part of Antler's UK 12th Cohort

In short: we are trying to map the human mind and fully understand it

Antler

Entrepreneur in Residence

September 2024 - December 2024 (4 months)

London Area, United Kingdom

Staff Site Reliability Engineering Manager for Large Language Models Infra (GenAI)

December 2023 - October 2024 (11 months)

London, England, United Kingdom

I manage a team of site reliability engineers whose mission is to make using Large Generative AI Models (GenAI) reliable and stable in production for whole Google.

This is done by building & supporting all the infrastructure to make it easier to use Large Generative AI models by developers, outside of the direct inference request to the model both internally and externally.

We own the reliability and stability for the infrastructure that supports most of Large Language Models (LLMs) in Google, for example: Gemini, Bard, Youtube, Search, Workspace, Ads and more.

Staff Site Reliability Engineering Manager

July 2022 - January 2024 (1 year 7 months)

London, England, United Kingdom

For Rich Communication Services (RCS or Chat for short) is a new messaging protocol that replaces old SMS and MMS on Android. In addition, RCS packs richer features, including many of those available in the best instant messaging platforms like WhatsApp, Telegram, and Signal.

RCS Business Messaging upgrades SMS with branding, rich media, interactivity, and analytics. With RCS,

businesses can bring branded, interactive mobile experiences to the native Android messaging app.

I manage the messaging RCS SRE team in Google, responsible for making sure that the services behind RCS and up and running smoothly for our over billion users around the globe. This also includes looking at potential applications for modern technologies and directions like generative AI (GenAI)

Amazon

Manager Software Development

April 2020 - December 2021 (1 year 9 months)

London, England, United Kingdom

I work in the selection and catalog platform team. Basically, we own whatever you see when you search for a product. We build, refine and integrate things like description, images, title, attributes and many other things for billions of products.

I manage the FSB Team. Short for Feeds Services & Bulk Ingestion

Our systems receive billions and billions of requests and we own some of the biggest databases and services in the world that is extending the limits of what distributed systems should be able to do!

Booking.com

1 year 8 months

Teams Manager

October 2019 - April 2020 (7 months)

Amsterdam, North Holland, Netherlands

Teams Manager

I am currently leading two teams that together own the experience of incentivizing people to use our services more

First team is the offsite/growth team, that team is responsible for engaging customers who are less engaged with the platform by optimizing ways to reach over to them. That could be done via emails, push notifications or other means. It could also mean sending those people coupons or upgrades

The second team is the onsite/enablement team. As the name suggests, this team is responsible for ensuring that a current visiting customer on the website is going to convert into a purchase. This is done by carefully analyzing customers behaviors and figuring out what's needed to secure that conversion.

Senior Team Lead

April 2019 - October 2019 (7 months)

Amsterdam Area, Netherlands

Leading engagement team in the rewards and engagement division of booking.com marketing incentives team

Senior Security Software Engineer / Tech Lead

October 2018 - March 2019 (6 months)

Amsterdam Area, Netherlands

Working for the fraud prevention team within booking.com

In my current role, I am playing two roles. First, as a senior developer in fraud prevention team, my daily job is to ensure account safety for everyone using booking.com. That includes guests and partners as well. This is done through building both manual and automated tools that help catch fraud, fake accounts, accounts take over and more.

As a tech lead, and the team's most senior member, my role also including making sure that the health of the team from the tech prospective. That includes (but not limited to) finding out what's missing between team members, offer help as needed and when needed, work with team members on the overall vision and architecture of the work the team does, integrate work with other teams in the division and more.

Senior Software Engineer

September 2018 - September 2018 (1 month)

Amsterdam Area, Netherlands

Neom Tech

Chief Technology Officer

January 2018 - August 2018 (8 months)

Cairo, Egypt

Neom Tech is the local branch for B-Care insurance brokerage that was created for the sole purpose of revolutionize how insurance works. Neom Tech vision of how insurance should work was through generating a pain-free eCommerce ecosystem that customers can start their insurance (vehicles, travel, medical, etc.) while entering very few info about themselves and the system will integrate with government 3rd parties to fill in the rest. The vision also included building insurance ATMs and several other revolutionary systems.

I helped Neom Tech build the tech team and tech stack from scratch till the point it was fully functional and working properly.

When I started in Neom, there was no team or office or anything in Egypt. I built all of that from scratch including building a world-class team

I was also dealing with a lot of external entities. On one hand, I was leading a team of 5 freelance developers, I was dealing with over a dozen insurance companies each with its own internal policies and technical system that is unlike others, few government entities that either monitor our work or give us access to very sensitive data about their citizens and other service providers. I always needed to find that win-win scenario so I can get the best outcome of each of them

joi Gifts

Chief Technology Officer

December 2016 - January 2018 (1 year 2 months)

Cairo, Egypt

joi is the MENA region's first full-service eCommerce mobile platform for physical gifts. joi was born out of the belief that the world can be made a happier place, one gift at a time. With the best quality flowers and free same-day delivery, premium cakes and chocolates, balloons, gourmet gift baskets, unique personalized items and more, we have what it takes to put a genuine smile on anyone's face and turn the experience of gift-giving into memorable occasions for you and those you care about the most.

My responsibilities are the overall management of the technical team in Joi and also acting as the managing director for the Cairo branch of the company

When I started, joi had one office in Dubai with a conversion rate of about 0.8% and the team size was 2 developers.

Before I left, there was a world class team with both tech and non tech (backend developers, frontend developers, full stack developers, architects, managers, iOS/Android developers, testers, content writers, data entry employees) and the conversion rate for Dubai reached about 8% with also having branches in over 12 more cities in KSA, UAE and Jordan

I also managed external contractors and dealing with several providers at the same time

Amazon

Software Engineer

August 2015 - November 2016 (1 year 4 months)

Shanghai City, China

Software engineer in business development department of Amazon's fulfillment center within amazon global logistics

In addition to my role as a software engineer, I was also handling the word between multiple teams in multiple geographical locations as a tech lead. That included worked between China, India and sometimes Seattle/London teams on common features and tasks between all these teams. Also I led multiple projects as the tech lead for the project within amazon

Microsoft

Software Engineer - Senior Level

November 2013 - July 2015 (1 year 9 months)

Suzhou, Jiangsu, China

Working in Cortana development team. We build the smart assistant "Cortana" for Windows and Windows for with different languages. This requires a non-stop work between developers and scientists in different areas like Machine learning, Big Data, web services, Language understanding, Conversation understanding and speech recognition.

As one of the top senior members of the team, my job went beyond just providing direct contribution as IC, but also as a tech lead who needs to find "whatever is missing" from the team and help getting it done!

Fifth Dimension (5d)

Department Head AR & Gaming

January 2013 - November 2013 (11 months)

Maadi, Cairo, Egypt

Fifth Dimension (5d) is a merger of five creative and technology oriented agencies (Mega Media Creative Development, Dream Makers, Global Technologies, Tonic Games and Small World Interactive) specializing in different areas to form a one-stop-shop delivering customer oriented digital marketing consulting, solutions and services company.

My role is managing a medium size team that is responsible for the production of both the augmented reality and gaming solutions and take every single product from early requirements collection all the way into production and release.

The applications we release are built on different platforms: iOS, Android, Facebook, Windows and Mac OS

We use Unity3D, Vuforia for augmented reality and C#

Microsoft

6 years 1 month

Senior Software Engineer - Contract

March 2011 - March 2012 (1 year 1 month)

Redmond, WA

Office 365 team

SDE II

April 2010 - February 2011 (11 months)

Kirkland, WA

Worked in Halo 4 team by working on the backend services. Daily job responsibilities were mainly reverse engineering of old Halo services code to better utilize them into the new Halo title and build documentations out of that code. Also debugging and testing the code that Microsoft inherited from Bungie Studios

Tools: C++, WCF, XDK

Software Design Engineer II

May 2006 - April 2010 (4 years)

Redmond, WA

SQL Server Development Team

Roles: Building APIs, Object Models, Frameworks, and other stuff for both DBAs and Developers that use SQL Server.

During my work period in SQL Server, I built or helped building these components:

1- Helped building SMO framework for SQL Server(C# & T-SQL): it was a data model framework for users who would like to deal with SQL Server without directly writing any T-SQL and doing that through code. SMO stands for Sql Management Objects.

2- Hosted SMO framework inside SQL Server CLR (C# & T-SQL): so people could use call SMO objects directly from T-SQL without the need to build any extra applications for that.

3- Helped building DMF (C# & T-SQL): DMF stands for Declarative Management Framework, which is basically the framework that was built for SQL Server 2008 to enable policy based management. I was part of the team

building the framework and the other code parts that the framework was based on.

4- Helped building Sfc (C# & T-SQL): When many teams in SQL organizations began to build their own frameworks for their components (RS, SS, RE, etc.) there was a need to build a base framework that all teams could utilize to build their frameworks without the need to keep rewriting and reinventing the same code again.

5- Helped building / fixing SSMS (C#, C++ & Win Forms): SSMS is the SQL Server Management Studio. It was based on Visual Studio shell and all UI was based on Windows Forms and C# (Except for the visual studio shell parts that were based on C++)

6- Built the whole data layer for SQL Server multi-server management (C# & T-SQL): I built the data layer for the new feature in SQL Server 2008 R2 which is called "SQL Server multi-Server management" which was designed to deal with terabytes of data. I also built more than 50% of the testing framework by building a complete simulation tool to simulate load and data inside the database over time which the test team utilized later and built their whole test framework on.

Software Performance Engineer

March 2006 - May 2006 (3 months)

Redmond, WA

Building and maintaining software solutions that test and monitor SQL Server performance matrices.

Timeline Interactive Inc.

Co-Founder / North America Representative

January 2008 - April 2010 (2 years 4 months)

Redmond, WA

Languages and Tools: C++/C#; Roles: Responsible on all

Location: Remote.

Responsible for communications with publishers in North America + Business Advisor / partner.

NTP Software

Team Lead

July 2005 - February 2006 (8 months)

Nashua, NH

Language and Tools: Visual C++, Visual C#, ASP.Net, Com, Com+, Windows and Web Services.

Roles: Responsible for the management and development for many software solutions and was managing a team of 4 developers.

interactive TV solutions

Game Developer and Interactive solutions Engineer

January 2004 - June 2005 (1 year 6 months)

Cairo, Egypt

Position: Software Developer while being at school

Languages and Tools: Visual C#, DirectX9, GDI+.

Roles: Responsible for the creation of many interactive solutions and 2D/3D games. The main job was to build 3D games for interactive TV where the user would play the 3D game through his cell phone while watching his favorite TV show. The game would only take a portion of the TV screen to display.

Ractors

Software Engineer

August 2003 - January 2004 (6 months)

Cairo, Egypt

Position: Software Developer while being at school

Languages and Tools: Visual C++, Hooking and APIs Interception.

Roles: Responsible for the creation of the interception and capping model inside many of the company's products. The company was building a security application that forces selected or all application in windows to connect to the internet through one or more proxy servers. I built a solution that was based on API interception to intercept all calls to networking APIs and reroute them through the new APIs that were built for the software.
