Ahmed Farghal

Co-Founder @ Restate | ex-Stripe | ex-Meta
London Area, United Kingdom

Summary

An engineer, maker, and lifelong learner with 20+ years of experience designing, building, and operating distributed systems. Ahmed leads the runtime design of Restate, an open-source distributed durable execution engine. Prior to Restate, he was a lead engineer at Stripe supporting teams integrating PayPal, Klarna, ApplePay, GooglePay, into Stripe's network of payment methods.

Before Stripe, he spent close to 7 years as a Staff Engineer at Meta (London) leading and co-designing Meta's distributed log storage and streaming-data ingestion infrastructure—LogDevice and Scribe.

Before joining Meta, he co-founded a startup offering cloud computing and consulting services to customers across EMEA. Our team, based in Egypt, achieved a notable milestone by obtaining a US patent (US8406682B2) cited by Amazon and Microsoft patents."

Experience

Restate

Principal Engineer | Co-Founder

October 2023 - Present (2 years 7 months)

Greater London

Stripe

Software Engineer

February 2022 - May 2023 (1 year 4 months)

London, England, United Kingdom

As a Technical Lead within the Global Payment Methods organisation at Stripe, I focus on empowering merchants to reach more customers worldwide by facilitating seamless integrations with local payment methods across supported markets. I lead the engineering group working on Apple Pay, Google Pay, Pay By Bank, WeChat, and other eWallets across the world.

Meta

6 years 5 months

Staff Production Engineer (IC6)

January 2019 - February 2022 (3 years 2 months)

London, United Kingdom

Production Engineers at Meta are hybrid software and systems engineers who ensure the production readiness and operational reliability of the services and products they are responsible for. Often embedded in products and infrastructure teams, they are core participants in every significant engineering decision across the company.

Production engineering tech-lead within the Data Platform organisation.

- PE tech-lead for internal log/event ingestion systems, i.e., LogDevice and Scribe.
- Led the design and implementation of LogDevice's control plane and its integration with the rest of the infrastructure.
- Led organisation-level project that defined the 5-year vision and execution plan of the future of data-ingestion systems at Meta.
- Reliability and quality sheriff provide actionable feedback on design documents and through code reviews across our teams.
- Partnered with managers on headcount planning, project assignment, and IC growth plans.

Company-wide command-line tools reliability engineering tech-lead

- Shaped the vision and technical direction for the team.
- Collaborated with the core Rust, Python, and Compiler & Language Runtime teams to raise the quality and reliability of internal command-line tools for infrastructure and first-responder engineers across the company.
- Implemented command-line tooling that is used by first responders during disaster scenarios.

Open Source Contributions

-Author of python-nubia (<https://github.com/facebookincubator/python-nubia>). It started as a hackathon project but evolved to be the primary framework for several shell-based CLI tools across the company.

Production Engineer

October 2015 - January 2019 (3 years 4 months)

London, England, United Kingdom

Production Engineer on the LogDevice (logdevice.io) team

Toptal

Senior Architect / Software Engineer

January 2015 - September 2015 (9 months)

San Francisco Bay Area

- Redesigned the data storage and serving layer for Lumba (SF-based gaming company) to scale their multiplayer online game. The backend is a mixture of Java and Scala.

Cloud Niners

Head Of Engineering | Founder

April 2010 - January 2015 (4 years 10 months)

Cairo, Egypt / Istanbul, Turkey

As a co-founder of Cloud9ers, I guided the technical direction for the core product, built and mentored the engineering team, and contributed to technology research and architectural design. I managed project execution, wrote specifications, and actively coded using technologies such as Scala/Akka, Play! Framework, Python/Jython, and Ruby on Rails. I successfully launched three products into production and supported the consulting team in customer acquisition and solution architecture activities.

Amplidata

Software Engineer

December 2008 - October 2010 (1 year 11 months)

Gent Area, Belgium

Worked on the C++, Python, and OCaml implementation of Amplidata's AmpliStor, a storage solution leveraging Erasure Coding (EC) to distribute and store data redundantly across multiple disks for enhanced reliability and data recovery.

Amplidata was acquired in March 2015 by HGST, a Western Digital subsidiary.

Linux Plus Information Systems

System Engineer

December 2005 - December 2008 (3 years 1 month)

Cairo, Egypt

Professional Linux/Unix Systems Engineer with some occasional software engineering projects. Installations and deployments of RedHat Enterprise Linux and Sun/Oracle Solaris.

Offered RedHat standard training courses, worked on the AUC data centre, Schlumberger, the central bank of Egypt, Etisalat, and more.

Education

Mansoura University

Bachelor of Science - BS, Computer Engineering · (2001 - July 2007)
